### Project Description

The goal of the Plan is to build a more reliable and resilient water future, ensuring we have enough water to support homes, businesses, agriculture, natural areas, and population growth during changing conditions.

In partnership with water providers, well-owners, and other stakeholders throughout Douglas County, the 2050 Comprehensive Douglas County Water Plan will begin with an evaluation of current water supplies and current demand. **As Douglas County grows, we will analyze how much water we'll need and where we need it most.** Your feedback will be key to developing concrete strategies for a sustainable water future as we grow.

The planning process will take approximately 18 months. It will provide information and data to stakeholders throughout the county and identify opportunities for collaboration and partnership.
